

A Pre-closure potential landscape

1951-2005 (n=55 obs); single shallow well

B Post-closure potential landscape

2006-2025 (n~20 obs) -- not estimable

Post-closure (>2005)

NOT ESTIMABLE

n ~ 20 observations post-closure;
potential_landscape() returned degenerate contract.

This is INDETERMINATE, not evidence against
an alternative attractor. (See synthesis.)

hysteresis verdict = INDETERMINATE
long_transient verdict = INDETERMINATE

Left: genuine pre-closure estimate.

Right: post-closure is not estimable at n~20 (underpowered, degenerate contract); this is not a confident absence of a second well.
